

GIRO duty 13309 · five places, three charging sites

Recorded schedule · same approximate layout in both panels · depot displaced for clarity · 22 passenger trips

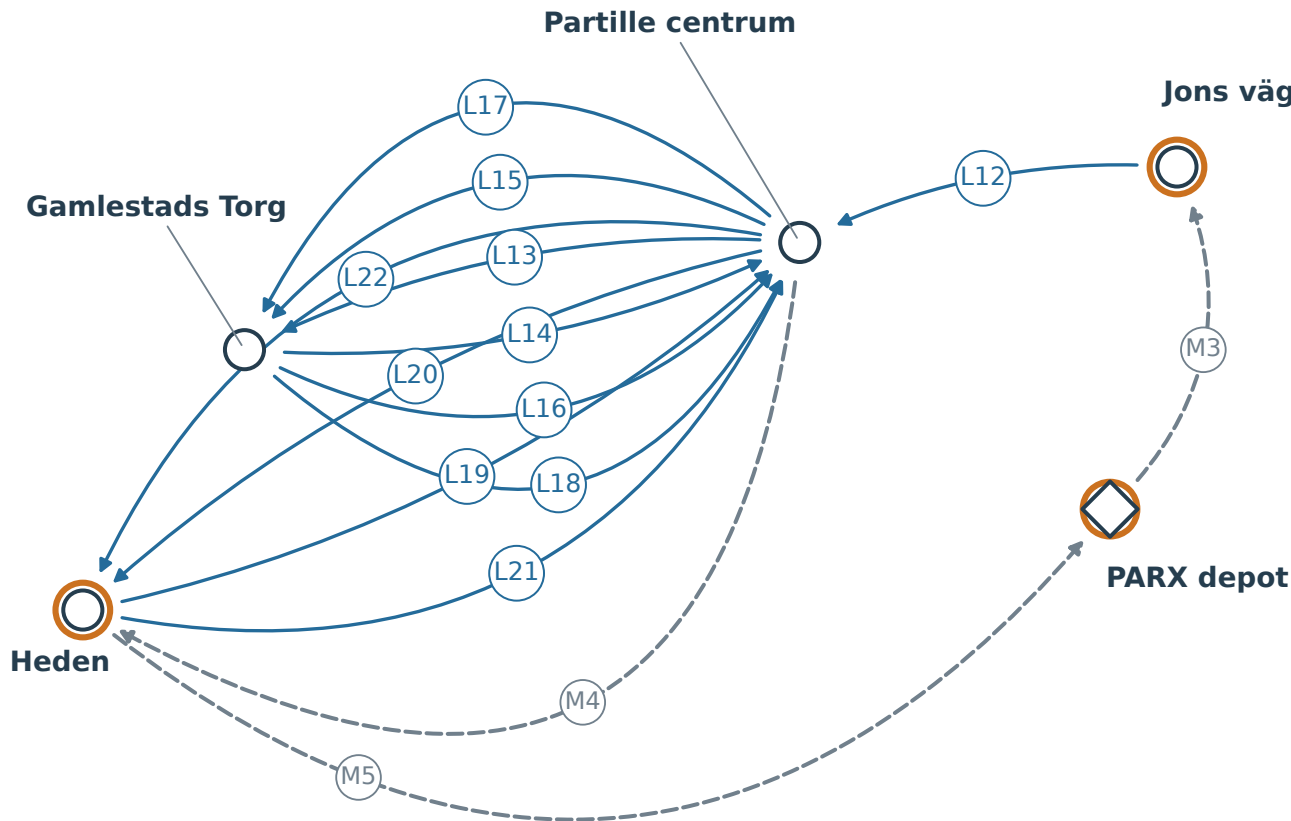

Morning · 05:19-10:42

M1 PARX → Heden 05:19-05:37
M2 Partille centrum → PARX 10:37-10:42

Morning charging
C1 Heden · 3127L 06:42-06:56 +40.6 kWh
C2 Jons väg · JON_A 09:15-09:25 +44.8 kWh

Afternoon · 12:43-19:02

M3 PARX → Jons väg 12:43-12:54
M4 Partille centrum → Heden 16:07-16:22
M5 Heden → PARX 18:47-19:02

Afternoon charging
C4 Heden · 3127L 16:22-16:49 +130.7 kWh

L = passenger-leg order, not Trip ID · M = inter-area empty-move order · orange rings identify charging sites
The editable itinerary preserves all trip clocks, numbered visits, platform movements, waits and preparation. This is not a newly optimized schedule.
Approximate layout, not road paths; depot displaced for clarity. Stop-area proxies © OpenStreetMap contributors; actual coordinates retained in CSV.

Duty 13309 — chronological leg key

L = passenger-leg order; M = inter-area empty-move order. Trip numbers are stable prepared-input labels, not GIRO-supplied journey numbers. The graph groups platforms through documented reference areas; the codes below retain actual recorded endpoints.

Step	Graph	Trip	Recorded endpoints	Departure	Arrival	Minutes
1	M1		PARX → HED_D	05:19	05:37	18
2	L1	226	HED_D → PC_10	05:37	06:07	30

Duty 13309 — numbered area visits

Visit bounds include local platform moves and dwells. The full event ledger follows. V numbering counts repeated arrivals to an area; it is separate from L/M/C numbering.

Scope: recorded GIRO original only; no optimized counterpart or new feasibility certificate. The four recharge amounts were independently checked against raw workbook cells and this duty’s 239.01 kWh18E2 capacity. The primary schematic displaces PARX for readability; coordinates.csv retains actual documented proxies and source URLs. Full extraction, source hashes and validation are in schedules.json and validation.json.
